CONDUIT KITS

[Contact Our Conduit Division \(http://westerntube.com/contact-conduit-division/\)](http://westerntube.com/contact-conduit-division/)

Conduit Kits, both Set Screw and Compression, are pre-assembled lengths of EMT with a coupling attached, and are therefore similar to RMC and IMC in consuming lower labor time during assembly.

Conduit Kits provide a labor-saving and time-saving alternative when assembling long runs of EMT on-site. Unlike other integrated coupling products, our steel set-screw and compression coupling Conduit Kits come with the distinct advantage that they allow you to take apart the leftover pieces and re-use them as needed. You get both savings and flexibility with every kit.

Conduit Kits are made from strip steel which is high frequency welded. A continuous hot galvanizing process is employed to zinc-coat exterior surfaces evenly and smoothly; and a special transparent secondary organic coating provides further protection against corrosion. The Conduit Kits are manufactured to meet the requirements of Underwriters Laboratories UL- 183, and are UL Listed. They utilize EMT that is Listed and meets the requirements of both UL-797 and American National Standards Institute (ANSI) Specification C-80.3. (Note – the U.S. Government Federal Specification WW-C-563A, formerly used for EMT, has been abandoned in favor of the UL spec.) The couplings used in our Conduit Kits all are UL Listed and meet the requirements of UL-514B. The Conduit Kits are approved, per the National Electrical Code (NEC). Article 358, for open, concealed and concrete slab installations.

Quality Controlled each step of the way – we perform regular tests for dimensions, weld strength, bendability, plating thickness and uniform smoothness of interior coating to provide you with conduit of the highest quality.

Easy to bend – perfect bends and offsets can be made quickly with lightweight, easy to handle Conduit Kits.

Easy, trouble free wire pulling – a special baked-on coating is applied to the inside surface of Conduit Kits in order to reduce friction, and provides extra ease in wire installation.

Conduit Kits are available in Trade Sizes 2", 2 1/2", 3" and 4" in 10' or 20' lengths.

**SAVE TIME
SAVE LABOR
REMAIN FLEXIBLE!**

manufactured in the U.S.A.

Our new Conduit Kit consists of a pre-assembled section of EMT with a coupling, as is traditional with Rigid and IMC. It provides a labor-saving and time-saving alternative when assembling long runs of EMT on site. Unlike other integrated coupling products, our steel set-screw and compression coupling Conduit Kits come with the distinct advantage that they allow you to take apart leftover pieces and re-use them as needed. You get both savings and flexibility with every kit.

All the components used in our Conduit Kits are UL listed, as is the assembly itself. Our conduit products are extremely corrosion resistant and meet all federal and state code requirements. Call your Sales Representative for more details.

CONDUIT KIT

Pre-tightened to UL-specified torque requirements.

WTC EMT is UL listed and meets requirements of UL-797

All couplings are UL listed and meet requirements of UL-514B

All Conduit Kits are UL listed and meet requirements of UL-183

Available with either steel set-screw or compression couplings

Size	Qty. per Bundle	Length per Bundle	Wt. per Kit	Approx. Wt. per Bundle
2"	52	520 ft.	15.3 lbs	800 lbs.
2 1/2"	33	330 ft.	23.0 lbs	760 lbs.
3"	33	330 ft.	28.2 lbs	930 lbs.
4"	27	270 ft.	41.8 lbs	1130 lbs.
